

SMW Quattro Digital

The optimized Quattro

For optimal performance and reliability in reception of Low- and High band transmissions simultaneously, as well as both Vertical- and Horizontal polarizations, SMW has designed a Quattro based on individually tested and adjusted products. The professional Quattro consists of two professional WDL LNBS and one ortho mode transducer (OMT) protected under a plastic cover.

Comes standard with Low Phase Noise, Low Noise Figure, F- or N-connectors. Options include high LO stability, low gain, low output VSWR 1.55:1 and customized LOs.

All our LNBS are individually hand tuned to get the very best performance available for each unit. Quality and long term reliability is also essential. Therefore are all LNBS tested according to a very extensive test program, which includes heating, cooling, water-proof testing and rigorous electrical testing.

Swedish Microwave (SMW) was founded 1986 and is today a leading manufacturer of professional LNBS (Low Noise Blockdownconverters) for the Ku-band market. The company is located in Motala Sweden, and to date the products are installed in more than 80 countries.

All In-house allows custom-design products, short delivery time, high flexibility, quick service and support.
