

LET RODENTS EAT SOMETHING ELSE

RODENTS: THE PESKY PESTS

With over 2000 living species placed in about 30 families, rodents are by far the largest order of mammals making up over 40% of mammals!

A rodent's incisors never stop growing. To control the length of their teeth, rodents will gnaw on anything including wires and cables causing millions of dollars in damages a year.

5 REASONS TO USE

- 1** Rodents run from the smell of FLEXO Rodent Resistant. 
- 2** Hide wires and cables in plain sight. 
- 3** Wires and cables are not rodent food. 
- 4** Wires work best when not chewed on. 
- 5** Your wires and cables don't need a pet.
